

Which operation can use the variable specified in Set Variable Operation

Need help?

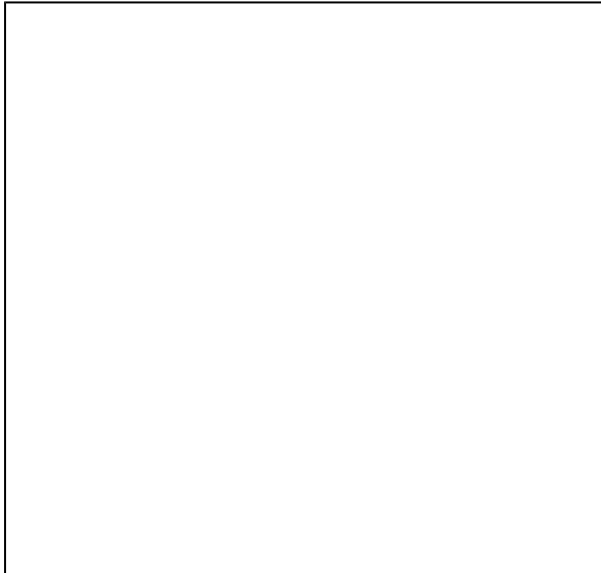

Technical contact to tech@argos-labs.com

Q. Which operation can use the variable specified in Set Variable Operation?

A.

1. Excel

After assigning Array variable, you can save as many values as the cell range in the variable using 'Excel'.

May you search all documents,

- [RPA+ Documents](#)

2. Repeat

You can set number of Repeat using the variable value.

You can use `rp.index` in 'Repeat' for multiple ids using Array variable. Each iteration uses a different id stored in Array.

3. Type Text

You can also use Variable in TypeText.

```
{{name.name({{rp.index}})}}.xlsx
```

4. Send Email
