- **Interactives**
- **Plugins**

- Usage notes are illustrated below.

Partial screenshot does NOT work.

Always use full screenshot.

You can choose mouse event from single, double, triple or right clicks, or simple move the mouse over to the position.

Base position means the position of mouse cursor when this operation executes. Full screen means x=0 and y=0 that is upper left corner.

Click action can be chosen from down-and-up, down, and up only. **Down click at one position and up click at another can set hold(drag) moves.**

The screenshot shows the configuration panel for the 'Click and Focus' operation. It includes fields for 'Action' (set to 'Click and Focus'), 'Operation name' (set to 'Operation 1'), and 'Delay' (set to 0.5 Sec). Under 'Properties', 'Base position' is set to 'Full screen'. The 'Click type' section shows radio buttons for 'DownAndUP', 'Down', 'Up', 'x2', 'x3', and 'x4', with 'DownAndUP' selected. The 'Click point' is set to x=0 and y=0. At the bottom, there are navigation icons: a play button, a plus sign, and a trash can.

For activation of your target app, use **Select Window**.
