 <p>Select Window</p>	<h3>Select Window</h3> <p>This is an extremely handy tool when your bot has multiple apps open on your desktop.</p>
--	--

May you search all operations,

- Verifications
- System Calls
- Interactives
- Plugins

- This tool will bring Windows “focus” to a specific app. (activation of an app)
- Just by taking the screen shot, it automatically captures the app name and title. (property-based navigation is more robust)
- **You can use “wildcard” (*) for the app name and title too.**
- **Click option** is available really to make sure the Windows focus has been brought to the app. Usually not needed.

Just take the screenshot and you can bring Windows focus to the app of your choice

Before trying to define click position, check the box for [Click] in the Properties section

Single primary (left) click is available.

By checking this box, you can use an optional click to really make sure that app window is activated by the Window for your bot

App name and title are automatically captured

You can use **wildcard (*)** too

The interface shows a configuration panel for the 'SelectWindow' operation. The 'Properties' section includes fields for 'App title' (CNN - Breaking News, Latest News), 'App name' (chrome), and a checked 'Click' option. The 'Delay' is set to 0.5 seconds. The 'Set Location' and 'Set Size' options are unchecked.
