 Onload Event	Onload Event - Limited Usage  This operation works only with Internet Explorer (IE) when it was opened with the Open Browser operation.
--	--

May you search all operations,

- **Actions**
- **System Calls**
- **Interactives**
- **Plugins**

It is a verification operation that waits until detection of the Onload Event message from the Internet Explorer.

The screenshot shows the configuration window for the 'OnloadEvent' operation. The left pane shows '1 OnloadEvent Operation 1'. The right pane has the following settings:

- Verification: OnloadEvent
- Operation name: Operation 1
- Properties: 최대시간 5 sec
- Result handler:
 - Success: MoveOn
 - Failure: TreatAsError

Two yellow callout boxes provide additional information:

- One box on the left states: "This operation only works with Internet Explorer."
- Another box on the right states: "This is Browser event. When it completes document download browser give 'OnloadEvent'."
