Image Match

- Image Match waits until target image appears on the App or the Full screen.
- It can be used to delay until the action has been executed and response has been delivered completely.
- It can be used to set up conditional branching logic.

May you search all operations,

• Parameter Settings

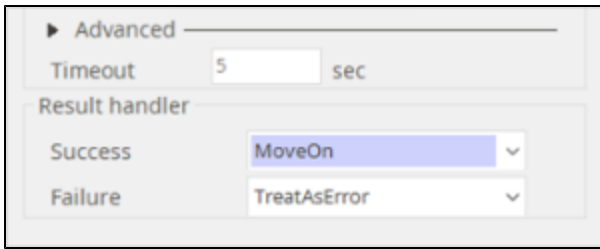

The screenshot shows the configuration window for the 'ImageMatch' operation. It includes a preview of a web page with a search area highlighted, and a settings panel with various options. Yellow callouts provide detailed explanations for key features and settings.

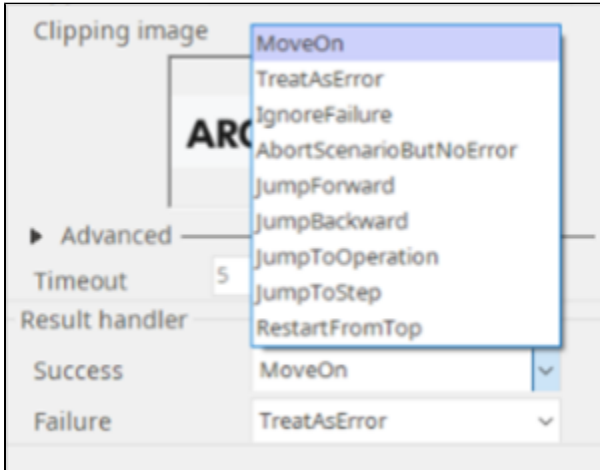

- This icon captures the full screen.** (Points to the full-screen capture icon)
- This icon captures app only screen.** (Points to the app-only capture icon)
- Choose either App window or Full screen (Do Not Choose Web Page)** (Points to the 'Search on' radio buttons)
- This icon captures the target image.** (Points to the target image capture icon)
- This icon sets up the search area on the screen.** (Points to the search area icon)
- When capture image, App name and App title show up here. (you can use wildcard (*) for dynamic Apps)** (Points to the 'App name' and 'App title' fields)
- Target image shows here.** (Points to the 'Clipping image' field)
- Use this section to set up conditional branching.** (Points to the 'Advanced' section containing 'Timeout', 'Result handler', 'Success', and 'Failure' settings)

• Conditional Branching

Timeout : Set time here to make the decision in seconds.

Result handler : Success > Choose from this menu for actions to both success and failure.
