Image Match

- Image Match waits until target image appears on the App or the Full screen.
- It can be used to delay until the action has been executed and response has been delivered completely.
- It can be used to set up conditional branching logic.

- Parameter Settings

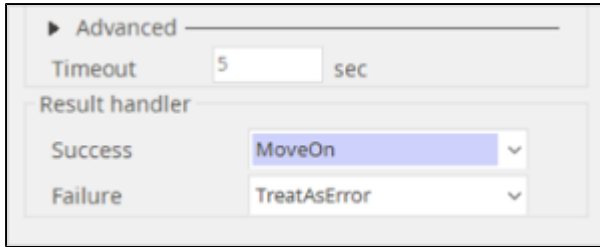

The screenshot shows the 'ImageMatch' configuration window. It includes a toolbar with icons for full screen, app only, and target image capture. The main configuration area has sections for 'Properties' (Search on, App name, App title, Clipping image) and 'Advanced' (Timeout, Result handler). Callouts provide detailed instructions for each element.

- This icon captures the full screen.
- This icon captures app only screen.
- Choose either App window or Full screen (Do Not Choose Web Page)
- This icon captures the target image.
- This icon sets up the search area on the screen.
- When capture image, App name and App title show up here. (you can use wildcard (*) for dynamic Apps)
- Target image shows here.
- Use this section to set up conditional branching.

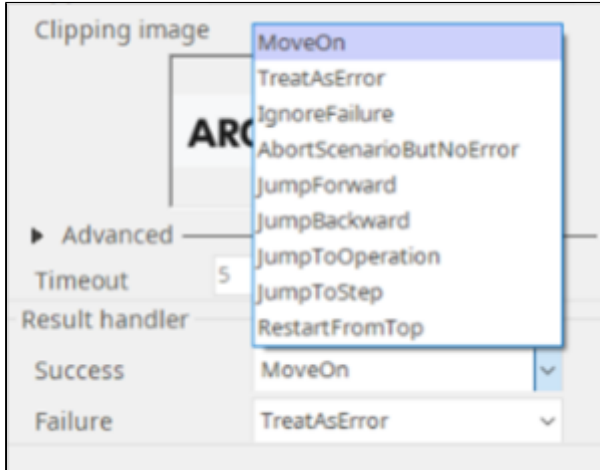

Text from Image

- Conditional Branching

Timeout : Set time here to make the decision in seconds.

Result handler : Success > Choose from this menu for actions to both success and failure.
