Svc Check

ARGOS API

Author: Jerry Chae

Description

The SVC (Service) Check plugin is for simply checking the network specific service connections by IP address and port number on local or remote machine. This is useful to check “connections” to solutions such as database or web server before an automation scenario attempts to access such solutions.

Need help?

Technical contact to tech@argos-labs.com

May you search all operations,

- **Actions**
- **Verifications**
- **System Calls**
- **Interactives**

Input (Required)

1) Host name (IP address or “localhost”

2) Port number (port number of the solution/service)

Advanced Input (Optional)

1) Return CSV If checked, the plugin will return CSV with 3 headers

Headers are [host, post, status]

If not checked the plugin returns alive or dead status only (default is 1 or 0)

2) Alive code Returns value when the service successfully connected (default is 1)

3) Dead code Returns value when the service connection failed or rejected (default is 0)

Output

Return Value

Contains value of your choice at the Advanced Input

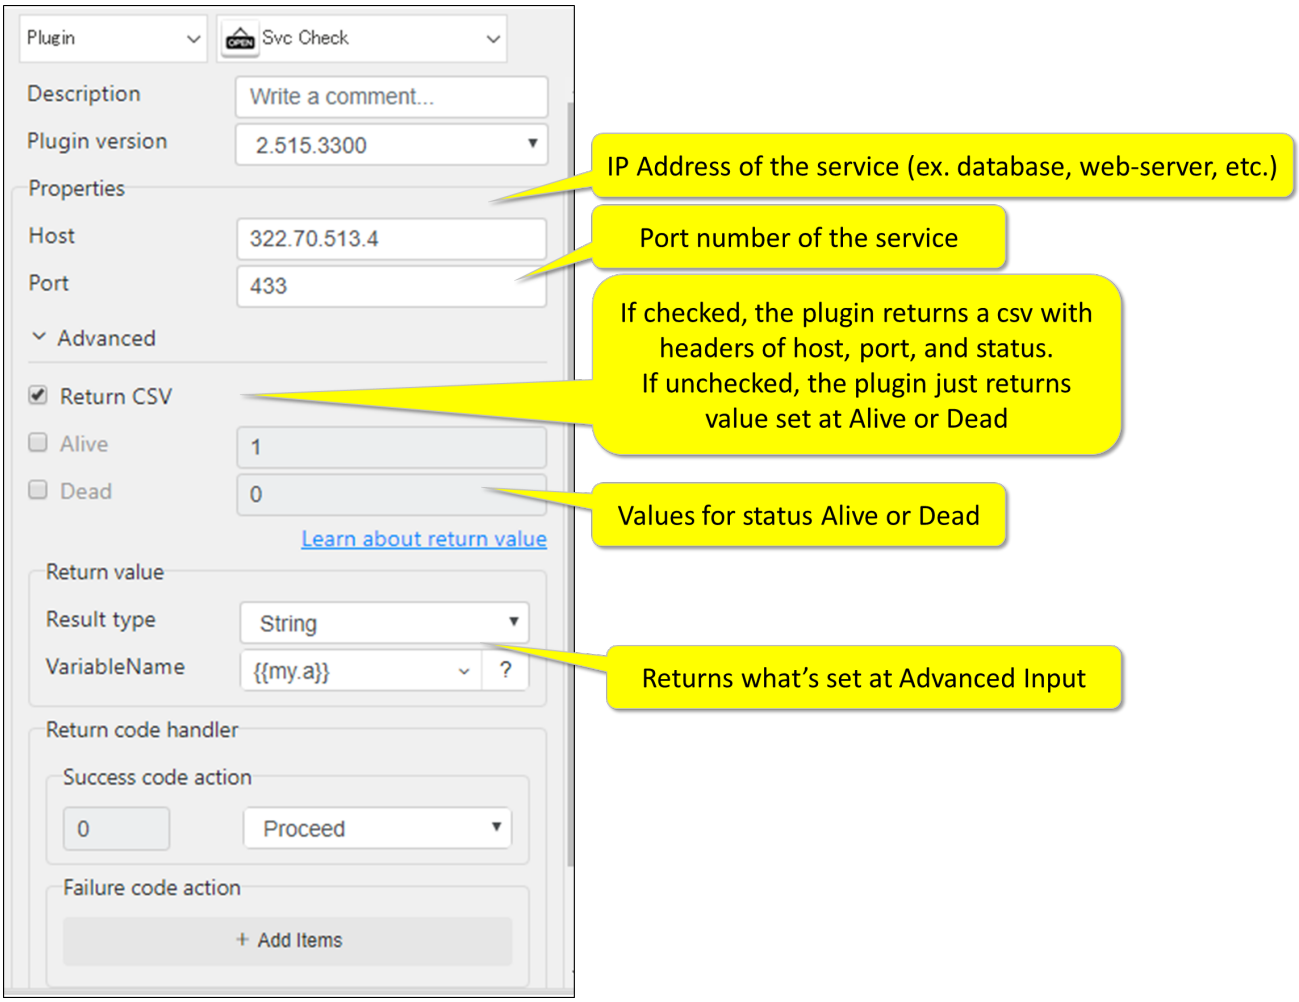

Same for String, CSV, and File

Return Code

0 for success

99 for everything else

How to set parameters

Return Code

Code	Meaning
0	Execution successful
1	Execution failed
