 Convert Image II	Convert Image II
	Author: Taiki Shimasaki Description This plugin does the format conversion of an image file such as .jpg to .png. 

May you search all operations,

- [Actions](#)
- [Verifications](#)
- [System Calls](#)
- [Interactives](#)

Input

- Full file path of the source image file. The file type will be auto detected. (If undetectable the plugin fails.)
- Destination folder to store the new image file after conversion. File name will be same as the source image file by default (you can change the file name with optional input)
- Target file type. Default is .png. Other choices are:
 - .jpg
 - .bmp
 - .gif

Optional Input

- File name
- File name validation feature (When "Sanitize" is selected unusable characters will be deleted and a underscore _ will be added at the end of the file name.)
- Procedure choice when the target file (filename) already exists

Output/Return Value

- The full file path of the converted file

Result Codes

- 0 for successful execution
- 1 for all non-successful execution

How to set parameters

The screenshot shows the configuration window for the 'Convert Image...' plugin. The following callouts provide details on the parameters:

- File Path:** Enter file path of the source image file
- Output Dir Path:** Enter the path of the folder that you want to save the converted file at
- Output File Type:** Pick a target file type. Choices are .png .jpg .bmp, and .gif
- Out File Name:** Enter a new file name if want to change from the original file name.
- File Name Valid...:** Check here if file-name sanitization is desired to be performed.
- If File Exists:** Check here if you desire for the file name conflict handler to be performed
- Return value:** Plugin returns file path of the converted file
- Return code handler:** Return code can be used to set up branching. 0 for success and 1 for failure will be returned.
