Repeat

You can choose how-many or how-long to define the duration of your repeat.

May you search all operations,

- [Verifications](#)
- [System Calls](#)
- [Interactives](#)
- [Plugins](#)

NOTE

Additional [Delay] is needed in your Repeat Loop when a [Delay] is used as "landing" of your Go-To or other conditional branching logic.

The COUNTER feature (variable) is available in the advance menu for keeping track of your repeat.

More advance manipulation of the Repeat operation using variables are described in detail in the **Benny's Secret Functions (BSF) document**.

⚠ Here is the link for [Benny's Secret Functions](#)

1 Repeat
Operation 1

2 RunProgram
Operation 3

3 TextInput
Operation 4

4 ShortcutKeys
Operation 5

5 Delay
Operation 6

6 KillProcess
Operation 2

Use this pull-down menu to register operations you want to repeat.

How many times? How long? You can decide the duration of your repeat here.

The Repeat operation also gives you this "Counter" variable. This is useful in keeping track of your repeat.

Action Repeat

Operation name Operation 1

Delay 0.5 Sec

Properties

Last operation [6] Operation 2

3 times

for 0 seconds

Advanced

Use index

Range 1 ~ 3 Increment 1

Variable use case {{rp.index}}
